

Consent for FRAXEL

Thank you for choosing Alazzo Med Spa, LLC. This form is exclusively related to Fraxel. Please read this form thoroughly and ask any questions that you may have prior to treatment. This consent will serve for all Fraxel treatments performed and does not need to be renewed. Sign only after you feel comfortable enough to get started.

I understand that the Fraxel 1550 and 1940 is a handpiece used for soft tissue coagulation and non-ablative skin resurfacing by targeting water in the skin and creating a thermal response in the dermis that stimulates new collagen. I am consenting to be a patient receiving non-ablative Fraxel 1550 and/or 1940 treatment.

I understand that this handpiece will not prevent me from developing or re-developing wrinkles and although this handpiece is effective in most cases, no guarantees can be made. I understand that I may not experience complete clearance and that it may take multiple treatments. I understand that some conditions may not respond at all and in rare cases may become worse.

I understand that clinical results may vary depending on individual factors, including but not limited to medical history, skin type, patient compliance with pre- and post-treatment instructions, and individual response to treatment.

I understand that there is a possibility of short-term effects such as:

PAIN & DISCOMFORT - The level of pain and discomfort varies with a person's tolerance, and both may be experienced during treatment.

BURNS - Laser energy can produce burns. Adjacent structures including the eyes may be injured or permanently damaged by the laser energy. Burns are rare yet represent the effect of heat produced within the tissues by laser energy. Additional treatment may be necessary to treat burns should they occur.

REDNESS & SWELLING - Short term redness (erythema) or swelling (edema) of the treated area is common and may occur. An urticarial (hive-like) reaction may occur as well.

SKIN SENSITIVITY - Itching, tenderness, or exaggerated responses to hot or cold temperatures may occur. This typically resolves during the healing process, but in rare situations it may be chronic.

WOUND HEALING - Treatment can result in burning, blistering, or bleeding of the treated areas resulting in a wound. If this occurs, please contact our office.

INFECTION - Infection is a possibility whenever the skin surface is disrupted, though proper wound care should prevent this. If signs of an infection develop, such as pain, heat or surrounding redness, please contact our office. Herpes simplex virus infections (cold sores) around the mouth can occur/ reoccur following a laser treatment. This applies to both individuals with a history of Herpes simplex virus infections and individuals with no known history of Herpes simplex virus infections in the mouth area. If you had cold sores in the past, please let your provider know as specific medications can be prescribed and taken both prior to and following the procedure to suppress an infection from this virus.

BLEEDING - It is possible, though unusual to experience bleeding or pinpoint bleeding during or after treatment. Should any post-treatment pinpoint bleeding or bleeding occur, please contact our office immediately. Products and medications such as aspirin, anti-inflammatories and blood thinners can increase the risk of bleeding. Nonprescription herbs and dietary supplements can also increase the risk of bleeding. It is sometimes advised or recommended that you avoid taking any blood thinners seven to fourteen days prior to and/or after your treatment. Speak to your medical provider before stopping any medications.

PIGMENT CHANGES (Skin color) - There is a possibility that the treated area can become either hypopigmented (lighter or white) or hyperpigmented (darker) in color compared to the surrounding skin. This is usually temporary but can be permanent.

EPIDERMAL CRUSTING - During the healing phase, small pin-point crusts may appear in place of each coagulated spot

If you have any questions after reading these guidelines, please do not hesitate to call us for clarification.

Consent for FRAXEL

where the laser contacted the skin. It is important not to pick or disturb the crusts as they heal. They may require medical attention if sensitivity or redness occurs. Crusts will typically slough off 1-2 weeks after treatment

SKIN TISSUE PATHOLOGY - Laser energy directed at skin lesions may potentially vaporize the lesion. Laboratory examination of the tissue specimen may not be possible.

VISIBLE SKIN PATTERNS - Frax 1550 may produce visible patterns within the skin. The occurrence of this is not predictable.

DAMAGED SKIN - Skin that has been previously treated with chemical peels or dermabrasion, or damaged by burns, electrolysis (hair removal treatments), or radiation therapy may heal abnormally or slowly following treatment by lasers. The occurrence of this is not predictable. Additional treatment may be necessary> If you have ever had such treatments, you should inform your treatment provider.

SCARRING - Scarring is a rare occurrence, but it is a possibility whenever the skin surface is disrupted. To minimize the chances of scarring, it is **IMPORTANT** that you follow all post-treatment instructions carefully.

TEXTURAL CHANGES/CUTANEOUS INDENTATIONS - Textural and/or skin changes may occur because of treatment.

ALLERGIC REACTIONS - In some cases, local allergies to products used during or after treatment such as adhesive, numbing agents, topical preparations and topical post-care have been reported. Systemic reactions which are more serious may occur to drugs used during the procedure. Allergic reactions may require additional treatment.

EYE EXPOSURE - Eye injury is possible from laser procedures. Protective eyewear (shields or goggles) will be provided. It is important to keep these on always during the treatment to protect your eyes from injury.

SUN EXPOSURE/ TANNING BEDS/ ARTIFICIAL TANNING - May increase risk of side effects and adverse events. It has been advised that you discontinue and avoid UV exposure and artificial tanning before, during, and after your treatment and recommended that you discontinue this practice all together as the effects of the sun are damaging to the skin. A broad spectrum (UVA/UVB) sunscreen should be used to prevent further pigmentation. Exposing the treated areas to sun may result in increased scarring, color changes, and poor healing. Patients who tan, either outdoors or in a salon, should inform their treatment provider and either delay their treatment or avoid UV exposure until your provider says it is safe to resume. The damaging effects of UV exposure occurs even with the use of sunscreen or clothing coverage.

TREATMENTS - The number of treatments vary but multiple treatments are always required. The number of treatments needed to improve and reduce your wrinkling is unknown.

LACK OF PERMANENT RESULTS - Frax 1550 or other skin treatments may not completely improve or prevent future skin disorders, lesions, or wrinkles. No technique can reverse the signs of skin aging. Additional Frax 1550 procedures may be necessary to further improve wrinkling. You may be required to continue with a skin care maintenance program after a Frax 1550 procedure.

UNKNOWN RISKS - There is the possibility that additional risk factors of Frax 1550 treatment may be discovered.
Additional Advisories

TRAVEL PLANS - Any treatment holds the risk of complications that may delay healing and delay your return to normal life. Please let the treatment provider know of any travel plans, important commitments already scheduled or planned, or time demands that are important to you, so that appropriate timing of your treatment can occur .There are no guarantees that you will be able to resume all activities in the desired time frame.

SKIN CANCER/SKIN DISORDERS - Frax 1550 / 1940 and skin treatment procedures do not offer protection against developing skin cancer or skin disorders in the future.

BODY PIERCINGS - Individuals who currently wear body-piercing jewelry in the treated region are advised that an infection could develop from this activity.

If you have any questions after reading these guidelines, please do not hesitate to call us for clarification.

MENTAL HEALTH DISORDERS AND ELECTIVE PROCEDURES - It is important that all patients seeking to undergo elective treatments have realistic expectations that focus on improvement rather than perfection. Complications or less than satisfactory results are sometimes unavoidable, may require additional treatments, and can be stressful. Please openly discuss with your treatment provider, prior to the treatment, any history that you may have of significant emotional depression or mental health disorders. Although many individuals may benefit psychologically from the results of elective procedures, effects on mental health cannot be accurately predicted.

PATIENT COMPLIANCE - Follow all pre-and post-instructions carefully; this is essential for the success of your outcome. Post-treatment instructions concerning appropriate restriction of activity, use of post-treatment care and use of sun protection must be followed to avoid potential complications, increased pain, and unsatisfactory results. Your treatment provider may recommend that you utilize a long-term skin care and/or post care program to enhance healing and results following a Frax 1550 treatment.

Disclaimer

Informed consent documents are used to communicate information about the proposed surgical treatment of a disease or condition along with disclosure or risks and alternative forms of treatment(s) . The informed consent process attempts to define principles of risk disclosure that should generally meet the needs of most patients in most circumstances. However, informed consent documents should not be considered all-inclusive in defining other methods of care and risks encountered. Your treatment provider may provide you with additional or different information, which is based on all the facts in your particular case and the state of medical and device knowledge. Informed consent documents are not intended to define or serve as the standard of care. Standards of care are determined based on all facts involved in an individual case and are subject to change as scientific knowledge and technology advance and as practice patterns evolve .

I certify that I have been fully informed of the nature and purpose of the procedure, expected outcomes and possible complications, and I understand that no guarantee can be given as to the final result obtained. I am fully aware that my condition is of cosmetic concern and that the decision to proceed is based solely on my expressed desire to do so.

I confirm that I have informed the staff regarding any current or past medical condition, disease or medication taken.

I consent to the taking of photographs and authorize their anonymous use for the purposes of medical audit, education and promotion.

I certify that I have been given the opportunity to ask questions and that I have read and fully understand the contents of this consent form.
